Agentic Data Science Canvas

The agent finds facts, the human decides, every result passes explicit checks.

Project _____ Team _____ Date / version _____

Problem

1 Decision
human decides

Who decides what, when, how often?
What happens today without this analysis?

2 Questions
human decides

Which questions would change the decision?
What can the data not answer?

3 Audiences
human decides

Who acts on the result? Who reproduces it?
Which format for whom?

4 Success
human decides

Which metric reflects the cost of errors?
Which baseline must be beaten?

Data and method

5 Data
agent drafts, human approves

Sources, unit of observation, period, keys
Gaps, missing values, licenses

6 Known in advance
human decides

When is the result needed?
What information exists at that moment?

7 Data decisions
human decides

Joins, missing values, encodings, exclusions
Each with a reason in the decision log

8 Checks
agent drafts, human approves

Checkpoints: load, merge, features, split, output
Expected values from independent sources

Evidence and action

9 Experiments
agent drafts, human approves

One change per experiment, baseline first
Decision rule written before the run

10 Findings
agent drafts, human approves

Answers, uncertainty, weak segments
What the data cannot tell

11 Recommendation
human decides

What to do, from when, under which conditions
Where not to rely on the analysis

Open questions

Who resolves it, by when?

Decision log

Date · decision · reason · alternatives

☐ Human decides ☐ Agent drafts, human approves
